QUICKSTRIKE NIAGARA

TEAM 6978

Thank you for all your support of our team! Without your sponsorship, this build season would not be possible. Here is what we have been working on over the past week.

Niagara College

This past weekend we competed at the niagara college campus in Welland, our second competition of the season! We finished in 14th place out of 27 teams, and were selected for alliance five.

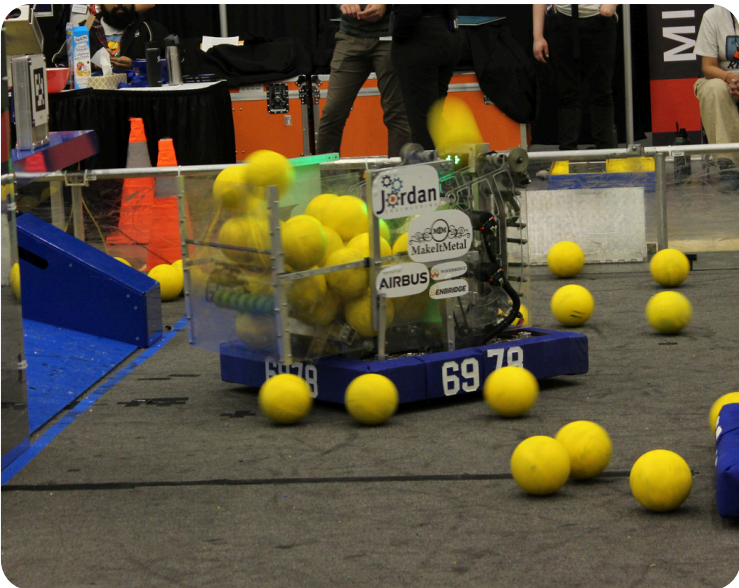

Preparations

In the weeks since our competition at McMaster we have been working hard to make any improvements that we could to our code, our autonomous programs, and made improvements to our intake, agitator, and our dual shooters for fuel. We have spent most of our time at the practice field, letting our drive team and new members gain experience.

Day one

One day one of the competition our scouting teams worked hard to gather data on the different teams during field matches, while our media team went into the pits to scout out teams individually and to learn more about the specific components of each robot. Our drive team performed extremely well, and new drive team members gained more valuable experience under the high pressure of matches.

Day Two

On the final day of our competition we played in two qualification matches before moving on to alliance selection. We were selected for alliance five, and were eliminated in the semifinals. Despite our struggles with our sliders for the storage extension, our drive team was able to adapt well and still scored major points despite the damage and change in strategy surrounding the missing part.
