QUICKSTRIKE NIAGARA

TEAM 6978

Thank you for all your support of our team! Without your sponsorship, this build season would not be possible. Here is what we have been working on over the past week.

Welcome Back!

We are so grateful to have you back as a sponsor for the 2026–2027 First Robotics Canada season! Our team is looking forward to a season of learning, creating, competing, and most of all, fun!

To start the season off...

This season, the Quickstrike family is proud to welcome several new students. To build a strong foundation, our team is demonstrating last season's robot to give new members a clear look into FRC operations. Combining experienced insights with new perspectives, students are actively collaborating to brainstorm ideas for the STEMley Cup on October 31st.

Programming

We are thrilled to share that our programming subteam has quadrupled in size this season. To bring our new members up to speed, returning programmers are collaborating with our lead coding mentor to deliver hands-on instruction in Java, the primary programming language for our upcoming FRC robot.

General Maintenance

Returning members that are not teaching new students are helping mentors clean, organize, and take inventory of our workshop so that we can be prepared for both the STEMley Cup and the kickoff of the new season in January.
