QUICKSTRIKE NIAGARA

TEAM 6978

Thank you for all your support of our team! Without your sponsorship, this build season would not be possible. Here is what we have been working on over the past week.

New and Improved

Our build and design team has been working hard to test our new single-wide shooter, and last saturday we removed the dual-shooter from our robot base and began to put the new shooter onto the base.

What can it do?

The new single-wide shooter will be able to shoot more fuel because it will experience less jamming than our dual shooter did. Over the next few weeks as we prepare for STEMley we will be testing and constantly improving the new shooter, making it as efficient as the competitors.

In other news...

Our programming sub-team is continuing to learn, whilst new students are reading the game manual and taking quizzes on it to ensure they know the rules for STEMley and are prepared for any interviews, or any questions that may come their way.

Design and Creativity

A member of our team is in the process of designing new uniforms for us this coming season, and we are looking forward to what she shares with us!
