QUICKSTRIKE NIAGARA

TEAM 6978

Thank you for all your support of our team! Without your sponsorship, this build season would not be possible. Here is what we have been working on over the past week.

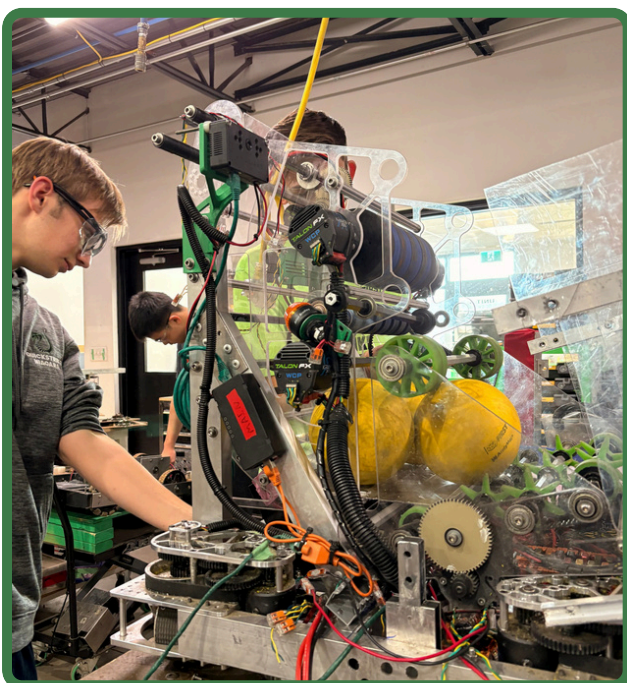

What's new?

We are working hard to prepare our team for the upcoming season, increase our media outreach, and encourage our students to get sponsorships in time for the new season.

Programming

At each meeting our lead programming mentor is leading lessons on Java programming, giving students assignments/tasks to do at home, all so that they are more than ready for the upcoming competitive season.

Testing of the students

In our last season we began to implement a new way of trying out for the drive team because we have so many more students! We have weekly quizzes on the game rules and closer to the end of the pre-season we will be allowing students to practice on our last season's robot to see test their skills!

Finalizing and Testing

We are in the final stages of testing our new shooting mechanism, having finished the attachment process earlier last week.

We are excited to see how the new shooter will perform compared to our original design.
