QUICKSTRIKE NIAGARA **TEAM 6978**

Thank you for all your support of our team! Without your sponsorship, this build season would not be possible. Here is what we have been working on over the past week.

Preparing for STEMley

STEMley is fast approaching, and we are extremely hopeful for it. We are continuing to test our new shooter, and are excited to show it off at the competition.

CAD

We are continuing to teach new students the basics of CAD 3D modeling, and are extremely hopeful for this years pre-build season to be faster than last years. With more students joining our CAD team we are hoping to dividie and conquer the upcoming season's competition.

Chugging Along

Programming students are continuing to work hard and are making significant progress in their learning. Students who are brand new to the STEM field are making progress in coding motors, while our advanced students are programming and wiring the new shooter.

Maintenance

Students are organizing the shop to prepare for the new season, while we are also upgrading some of the safety equipment to make it more sturdy.
